

Unity II - Code Analysis

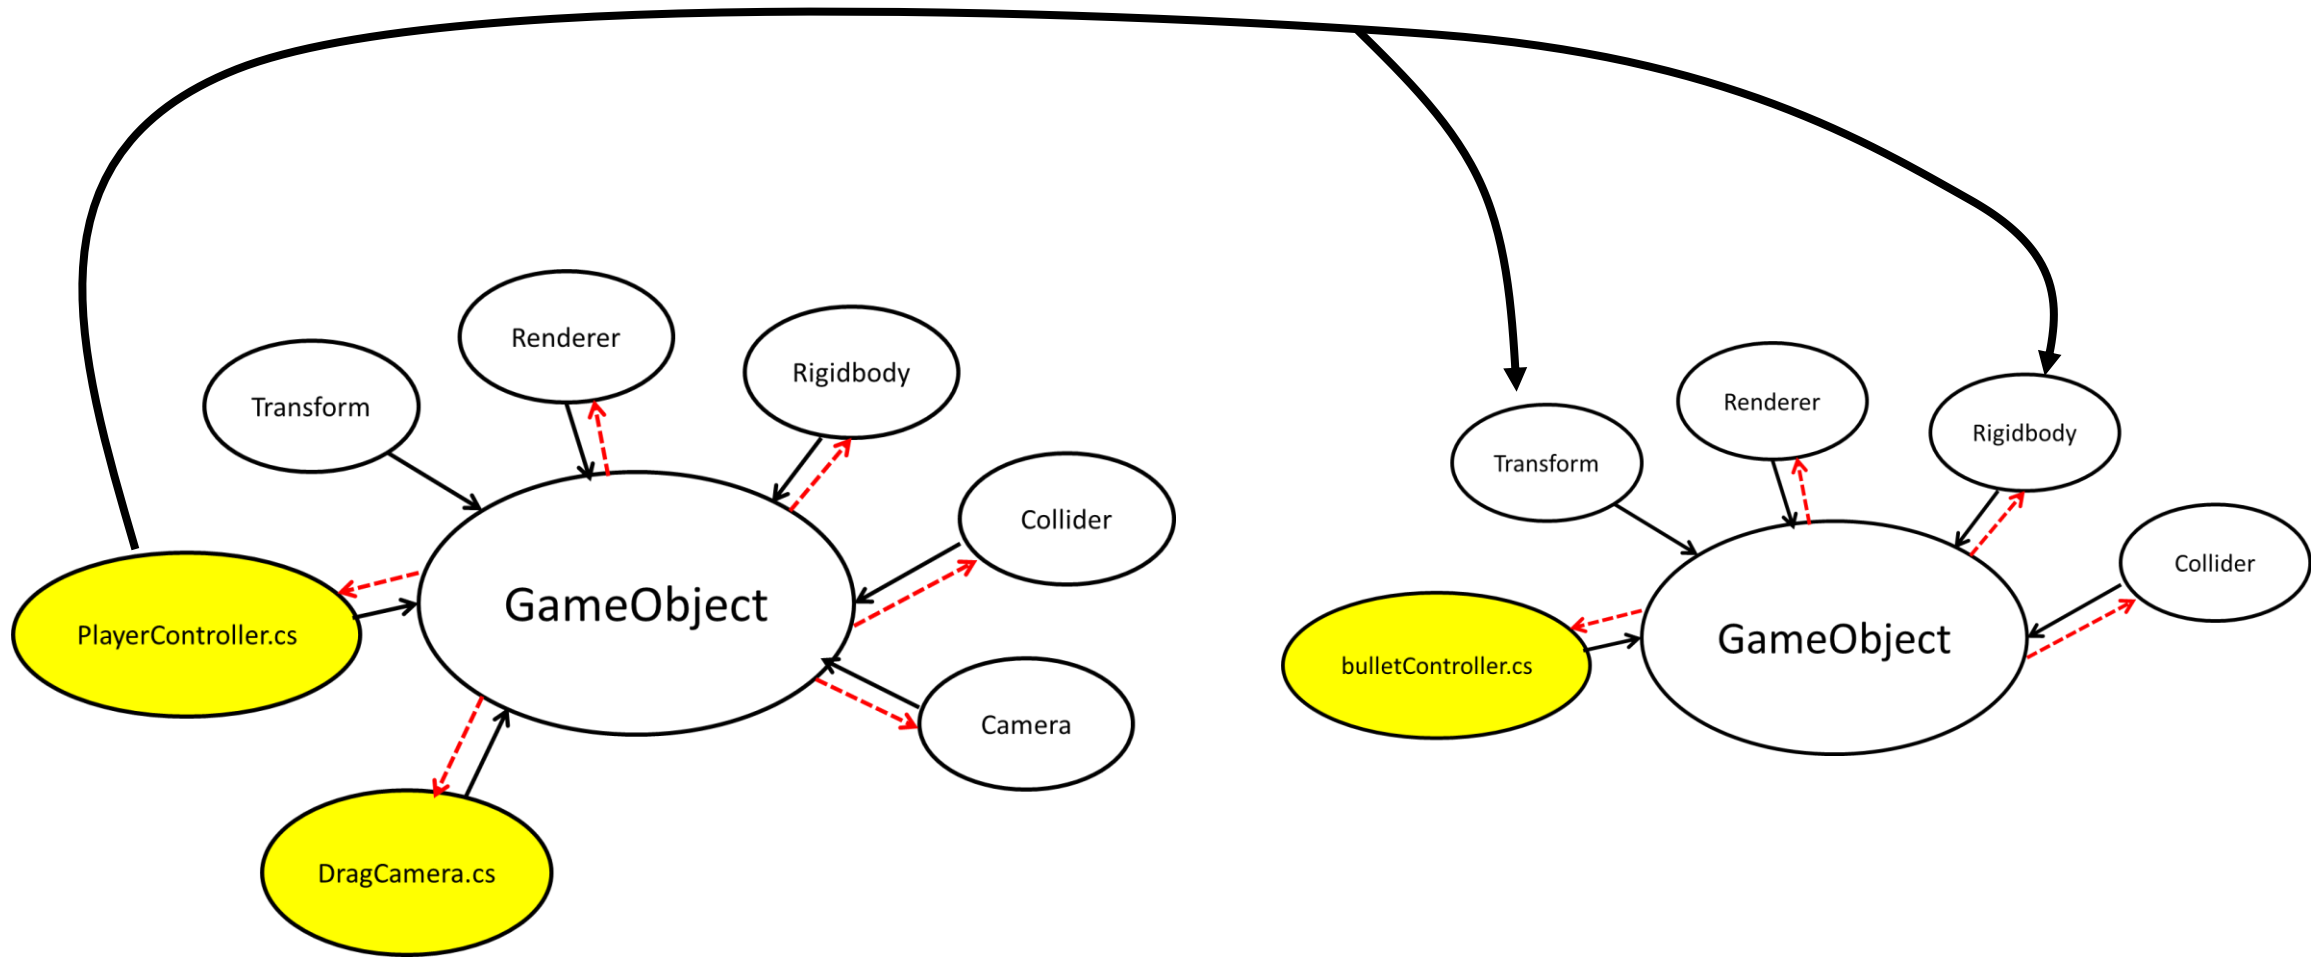

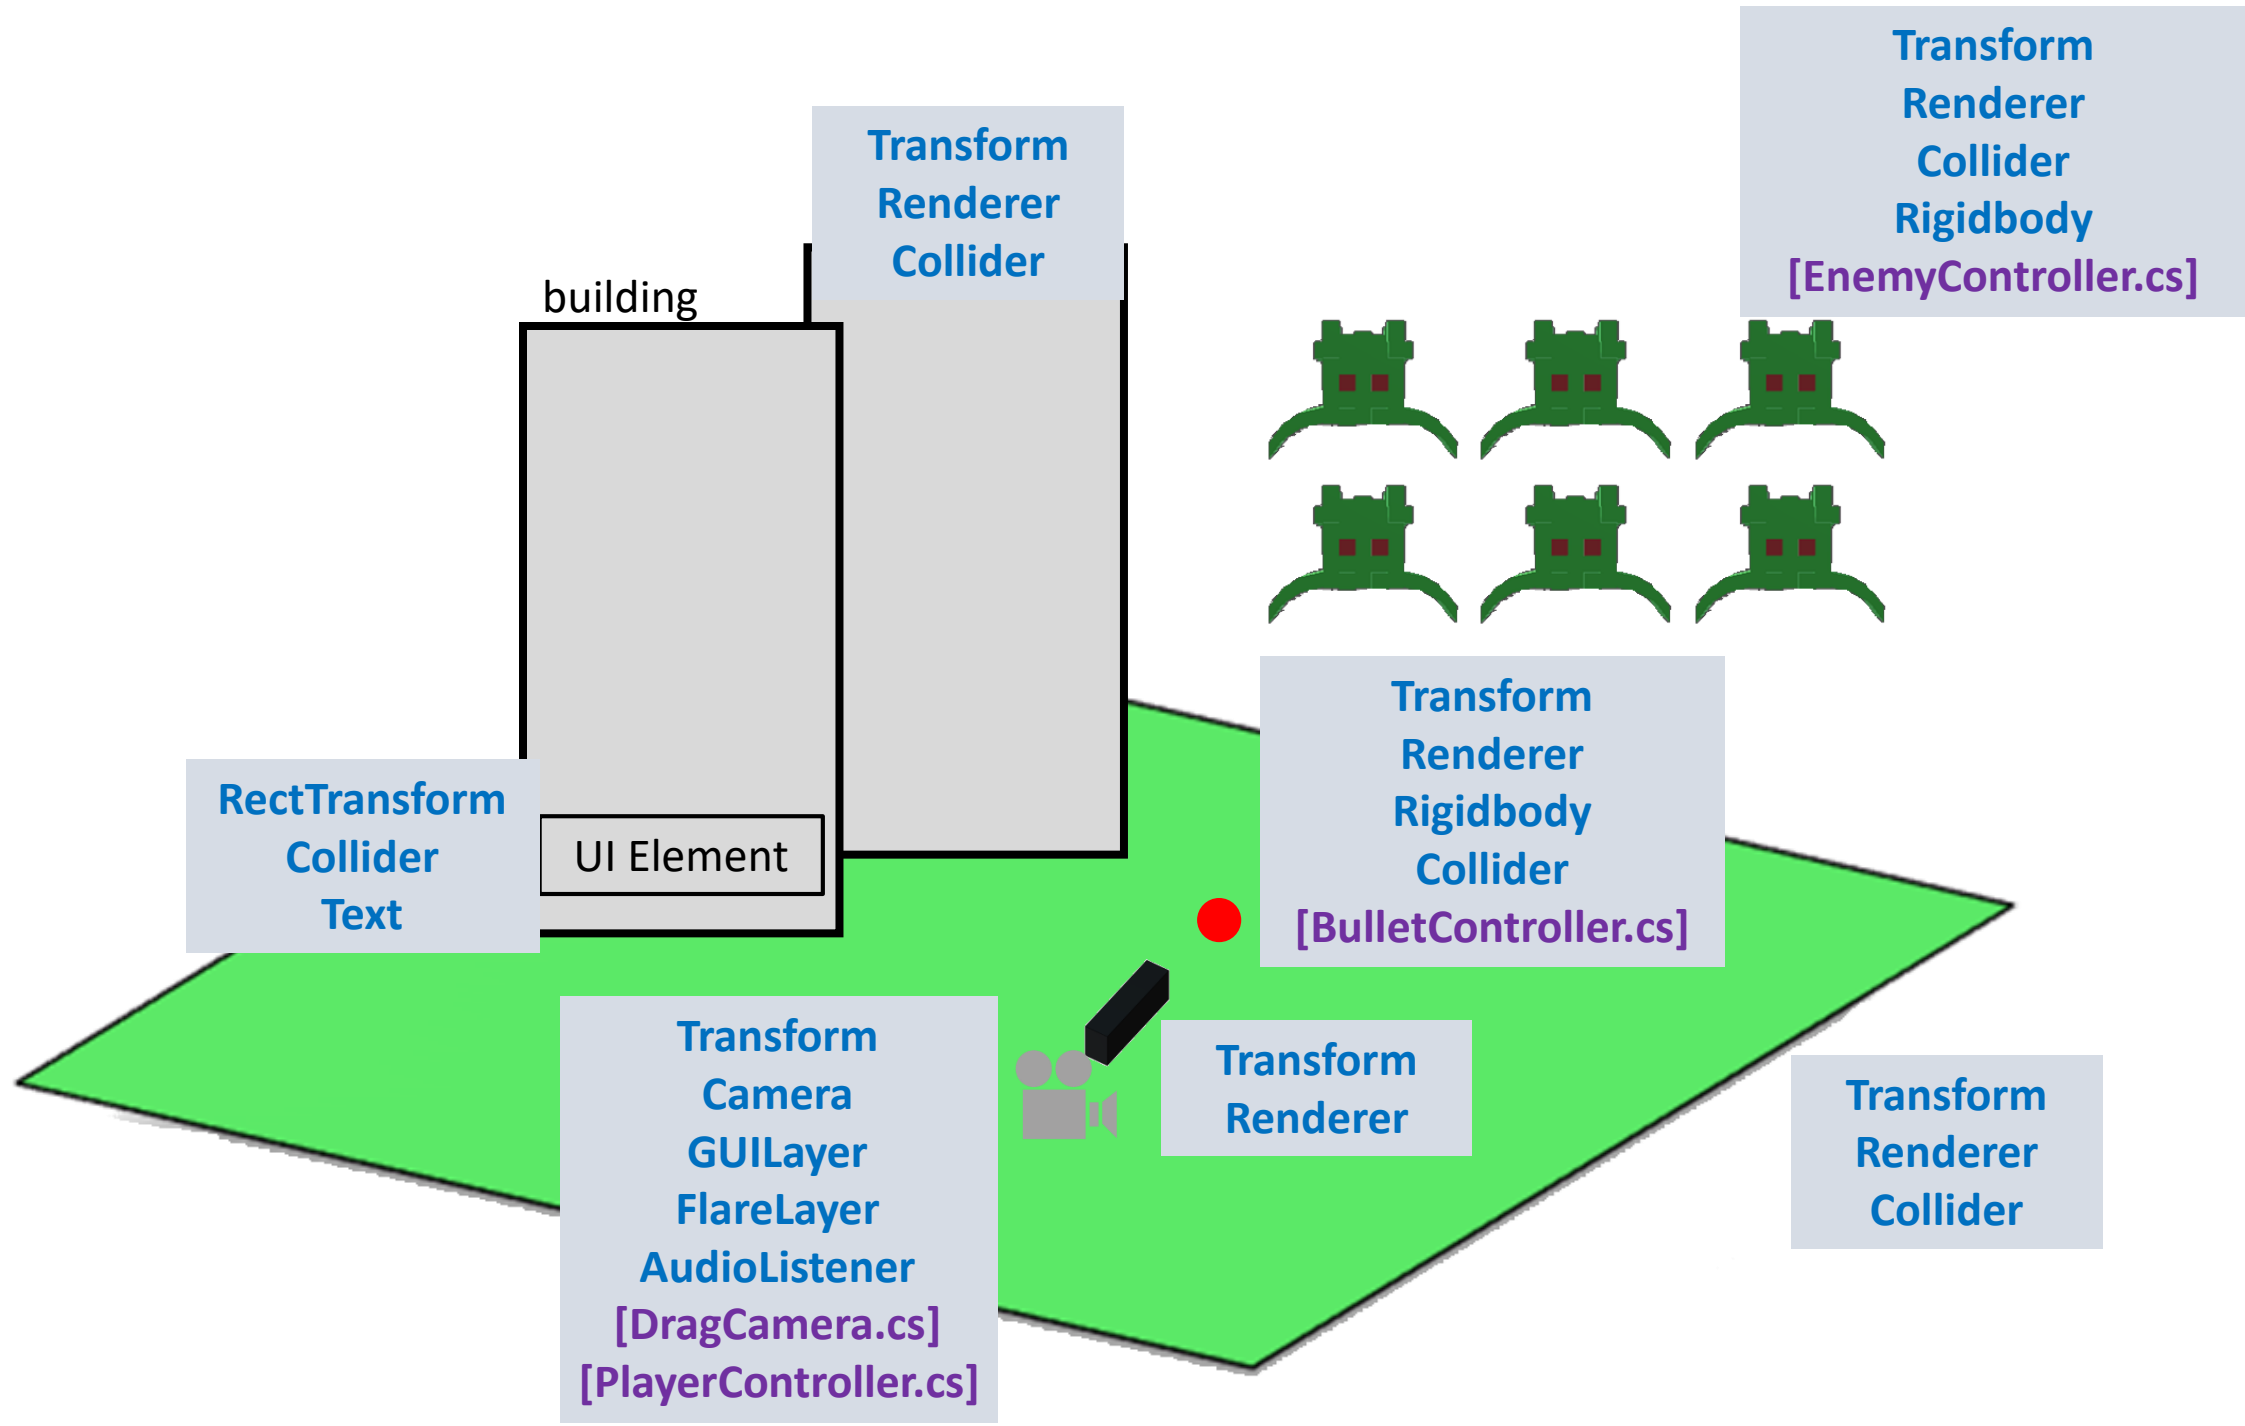

GameObject is the base entity in the unity scene.

A GameObject has many components.
They all can be attached or removed in Unity or by script.

Giant Dinosaur Experience

Game Structure

Game Concept

- “Gozilla” type of experience. Fighting giant monsters as city gets destroyed around you.
- Use Controllers to “Grab” and “Throw” objects.

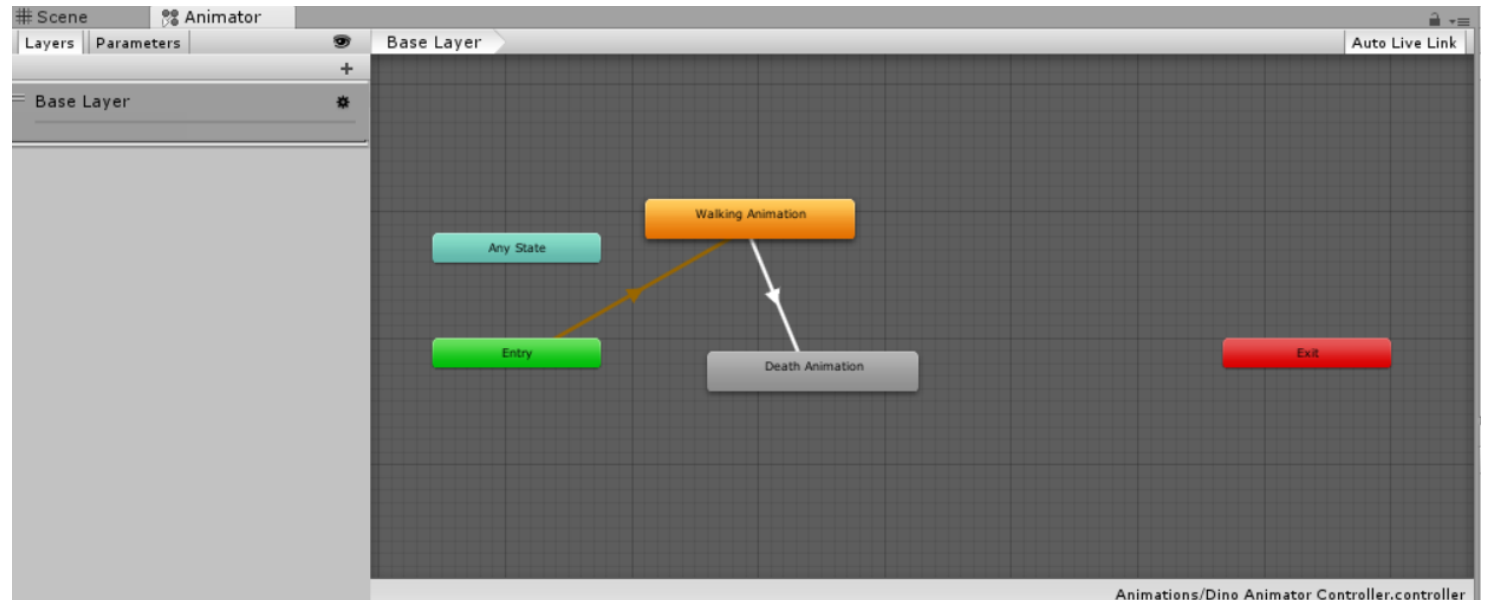

DinoController.cs

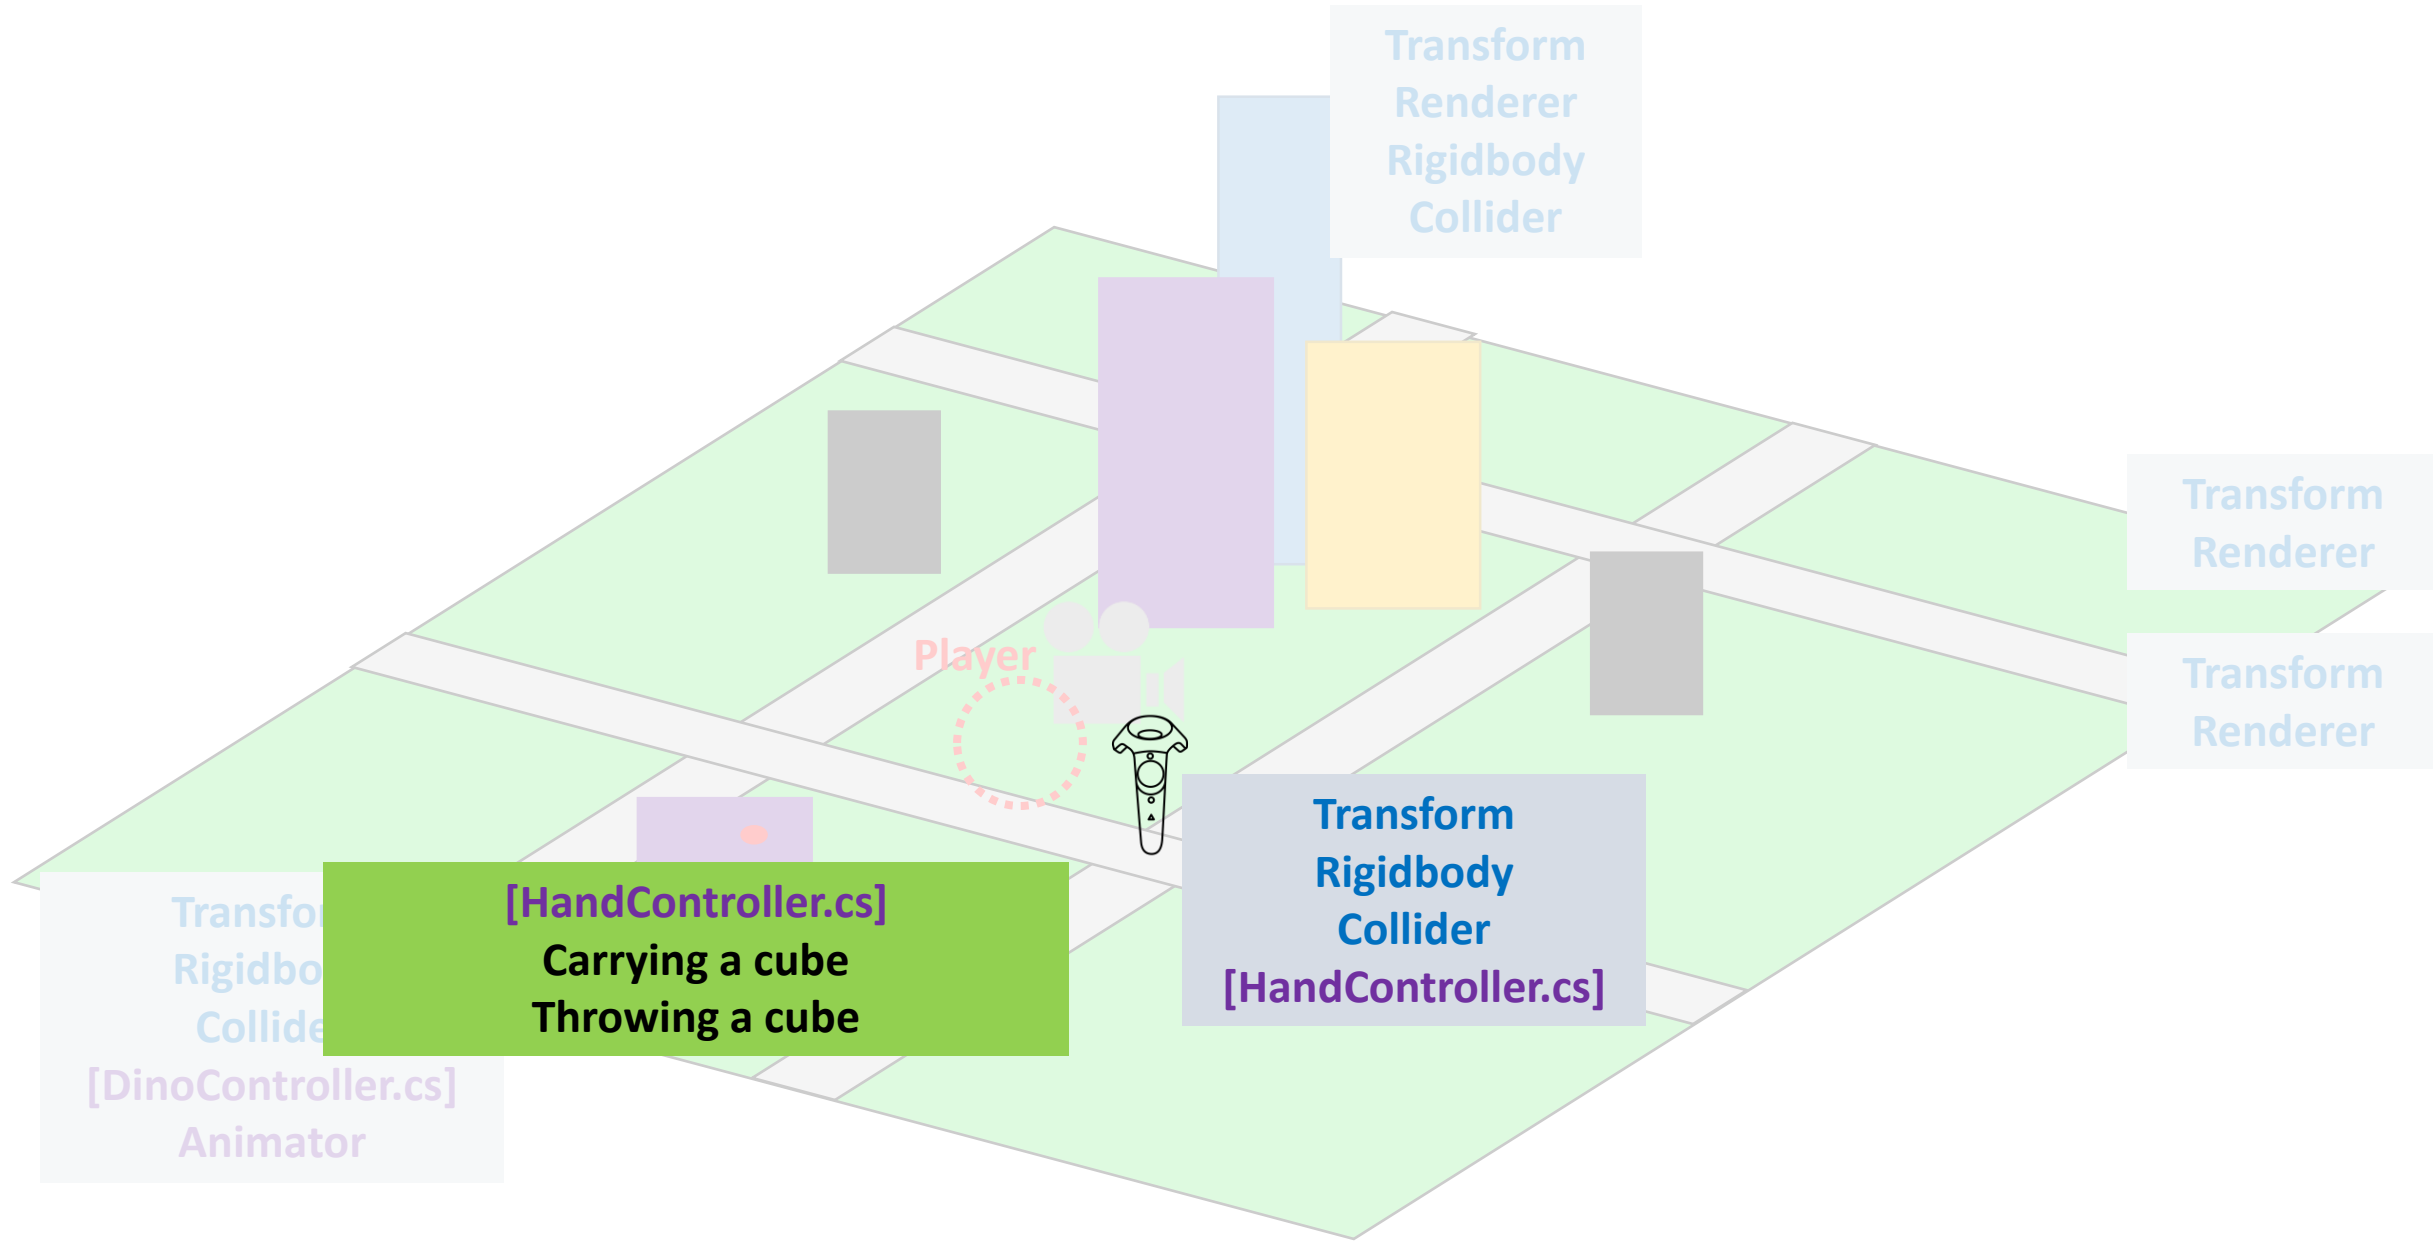

- Moving forward to the camera
 - FindTarget()
 - FixedUpdate()
- Detect the building cube's collision
 - OnCollisionEnter()
- Detect the camera's collision
 - OnTriggerEnter()

DinoController.cs

- Show animator when died
 - Animator Controllers: state machines that determine which animations are currently being played and blends between animations seamlessly.
 - The defeat animation is set in OnCollisionEnter()

HandController.cs

- SteamVR_TrackedController

2 references

```
public SteamVR_TrackedController controller;
```

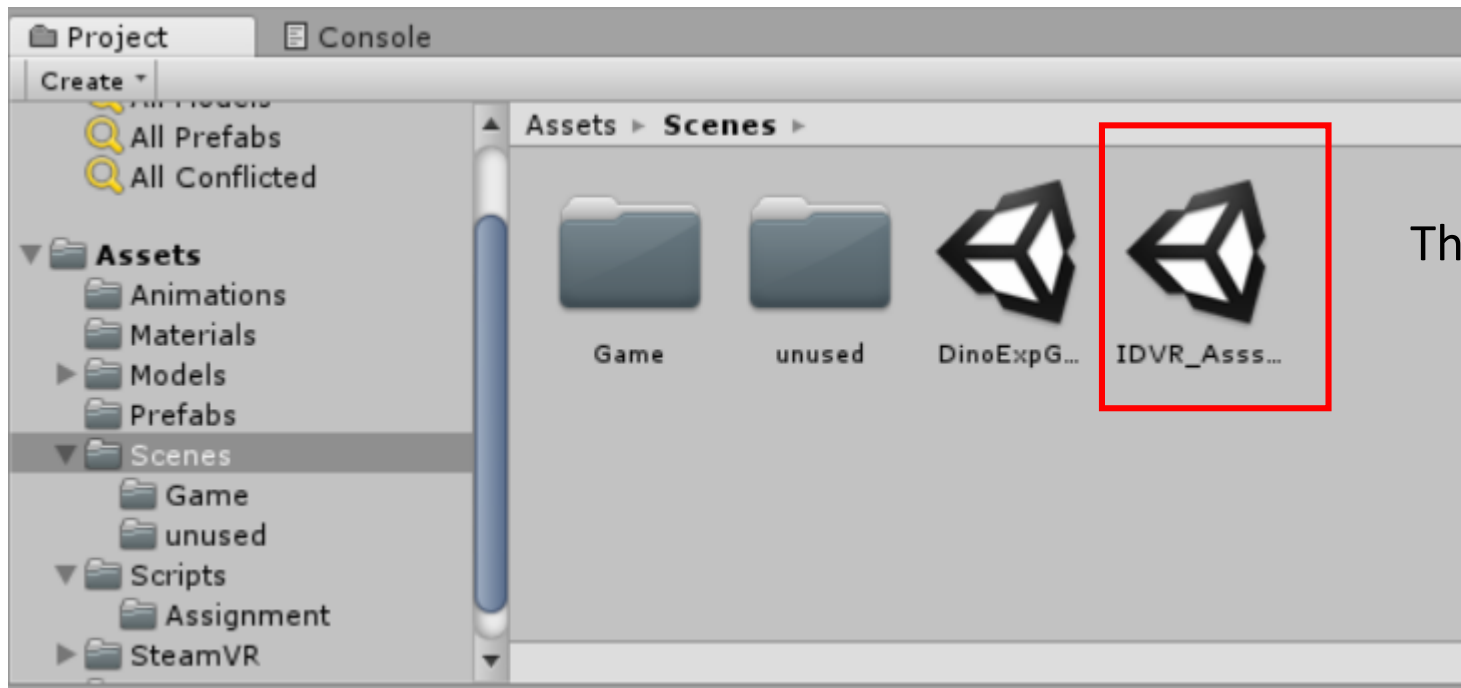

```
// check user input  
if (controller.triggerPressed)  
// if (controller.steamPressed)  
// if (controller.menuPressed)  
// if (controller.padPressed)  
// if (controller.padTouched)  
// if (controller.gripped)
```

HandController.cs

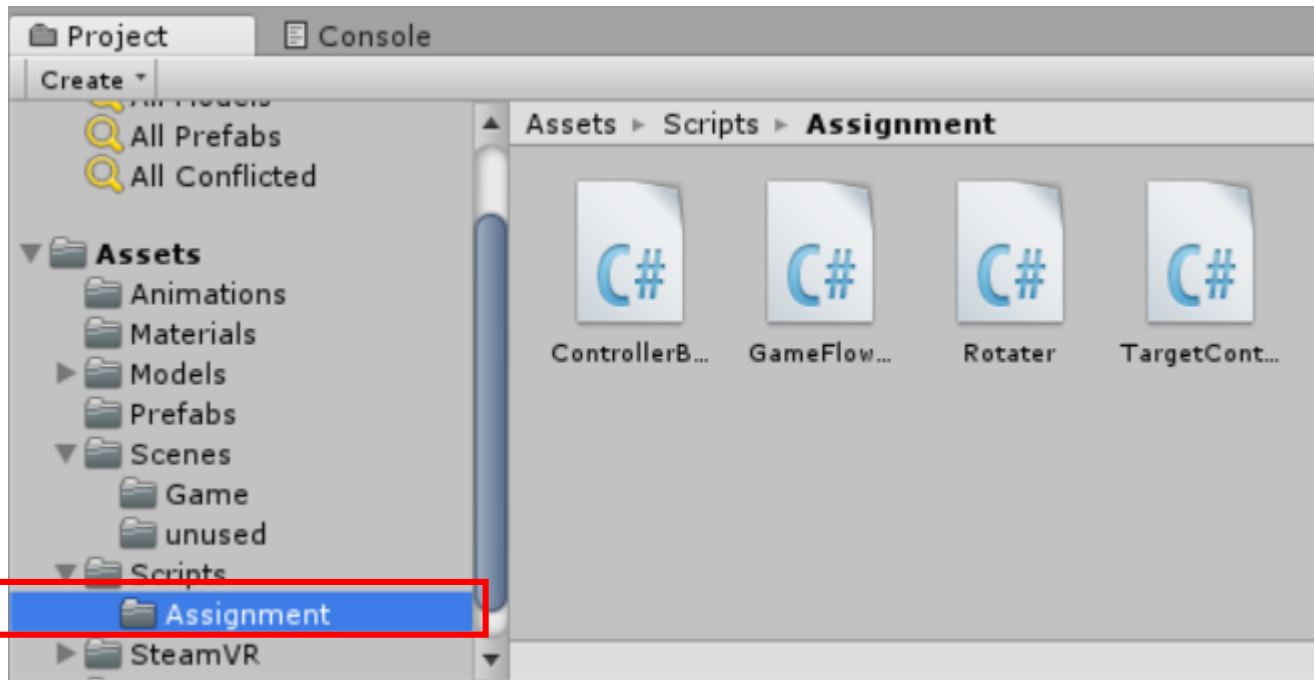

- Carrying a cube
 - Update()
 - OnTriggerStay()
 - OnTriggerExit()
 - Carry()
- Throwing a cube
 - Update()
 - Throwing()

Assignment 3

The scene we are going to use in assignment 3

The scripts we need are located in the Assignment folder (Under the Scripts).

Transform
[GameFlowManager.cs]
[TargetController.cs]

Player

Transform
Rigidbody
Collider
[ControllerBehaviour.cs]

Transform
Renderer
Rigidbody
Collider
[Rotator.cs]

A single cube will instantiate at a position where
player cannot directly fetch that cube

Transform

[GameFlowManager.cs]

[TargetController.cs]

A single cube will instantiate at a position where player cannot directly fetch that cube

Player

Transform
Rigidbody
Collider
[ControllerBehaviour.cs]

Your task: create an interaction with controller
so that you can get the cubes

Transform

[GameFlowManager.cs]

[TargetController.cs]

For example, we can use Raycast to select the cube
and use TriggerPress to drag the cube to player

Player

Transform

Rigidbody

Collider

[ControllerBehaviour.cs]

Transform

[GameFlowManager.cs]

[TargetController.cs]

Player

As the cube trigger the collider
of controller, it disappears

Transform

Rigidbody

Collider

[ControllerBehaviour.cs]

Transform
[GameFlowManager.cs]
[TargetController.cs]

Player

The next cube will instantiate at
a different position

Transform
Rigidbody
Collider
[ControllerBehaviour.cs]

Transform

[GameFlowManager.cs]

[TargetController.cs]

Player

[ControllerBehaviour.cs]

Use Raycast to select
Use trigger to drag
Draw the line
Set the next target

Transform
Rigidbody
Collider

[ControllerBehaviour.cs]

Transform
Renderer
Rigidbody
Collider
[Rotator.cs]

ControllerBehaviour.cs

- Use Raycast to select
 - Update()
- Use trigger to drag
 - Update()
- Draw the line
 - setLineRenderer()
- Set the next target
 - OnTriggerEnter()

Transform

[GameFlowManager.cs]

[TargetController.cs]

[GameFlowManager.cs]

Record the amount of selected cubes

Player

Transform
Rigidbody
Collider

[ControllerBehaviour.cs]

Transform
Renderer
Rigidbody
Collider
[Rotator.cs]

GameFlowManager.cs

- Record the amount of selected cubes
 - nextTurn()

Transform

[GameFlowManager.cs]

[TargetController.cs]

[TargetController.cs]

Renew target

Disable target

Set the target position

Player

Transform

Rigidbody

Collider

[ControllerBehaviour.cs]

Transform

Renderer

Rigidbody

Collider

[Rotator.cs]

TargetController.cs

- Renew targets
 - `renewTarget()`
- Disable targets
 - `disableTarget()`
- Set the target position according to the position of camera.
 - `setTargetPosition()`

Transform
[GameFlowManager.cs]
[TargetController.cs]

Player

Transform
Rigidbody
Collider
[ControllerBehaviour.cs]

Transform
Renderer
Rigidbody
Collider
[Rotator.cs]

Rotator.cs

- Rotate the block to get player's attention
 - Update()

```
// Update is called once per frame
0 references
void Update () {
    //Rotate the gameObject 15 degrees, 30 degrees, 45 degrees in x,y,z axis every second
    this.transform.Rotate(new Vector3 (15, 30, 45) * Time.deltaTime);
}
```

Your task: create an interaction with controller
so that you can get the blocks

Requirement 1: use locomotion to get 5 blocks

Your task: create an interaction with controller
so that your can get the blocks

Requirement 1: use locomotion to get 5 blocks

Requirement 2: shoot a video and screen record

Your task: create an interaction with controller
so that your can get the blocks

Requirement 1: use locomotion to get 5 blocks

Requirement 2: shoot a video and screen record

Bonus: tunneling effect

Your task: create an interaction with controller
so that your can get the blocks

Requirement 1: use locomotion to get 5 blocks

Requirement 2: shoot a video and screen record

Bonus: tunneling effect

Locomotion

- [Walking in place](#)

Locomotion

- [ArmSwing](#)

Your task: create an interaction with controller
so that your can get the blocks

Requirement 1: use locomotion to get 5 blocks

Requirement 2: shoot a video and screen record

Bonus: tunneling effect

Edit a Video with Screen Shot and Player in Reality

- For more details, see the appendix.

Assignment 3

- Please upload a zip file which contains:
 - The **unitypackage** export from your project. (The following slides will teach you how to do it)
 - A video to demonstrate your interaction and your score. (less than 30 seconds)
 - A “README” file to describe the details of your implementation.
- Deadline: 10/26 12:00
- Link: <https://www.dropbox.com/request/4uTEIeiMfMGPcKt88IUN>

Export Package

- After all the things was done export your project to be the unitypackage.
- Assets -> Export Package...

Remind

- Assignment 2 (Personal): 10/15 23:59
- Assignment 3 (Personal, need VR): 10/26 12:00
- Midterm-project proposal: 10/23 & 25

028 VR Registration

028 VR Registration

- [Link](#)
- Available Time: Mon – Thur 18:30 – 21:30, 10/9 – 10/25
- Must register a time slot before you use.
- This is an individual assignment, register with your own name.
- Send us message if you have any question.

Appendix: Screen Record with PPT

Video editing with PPT

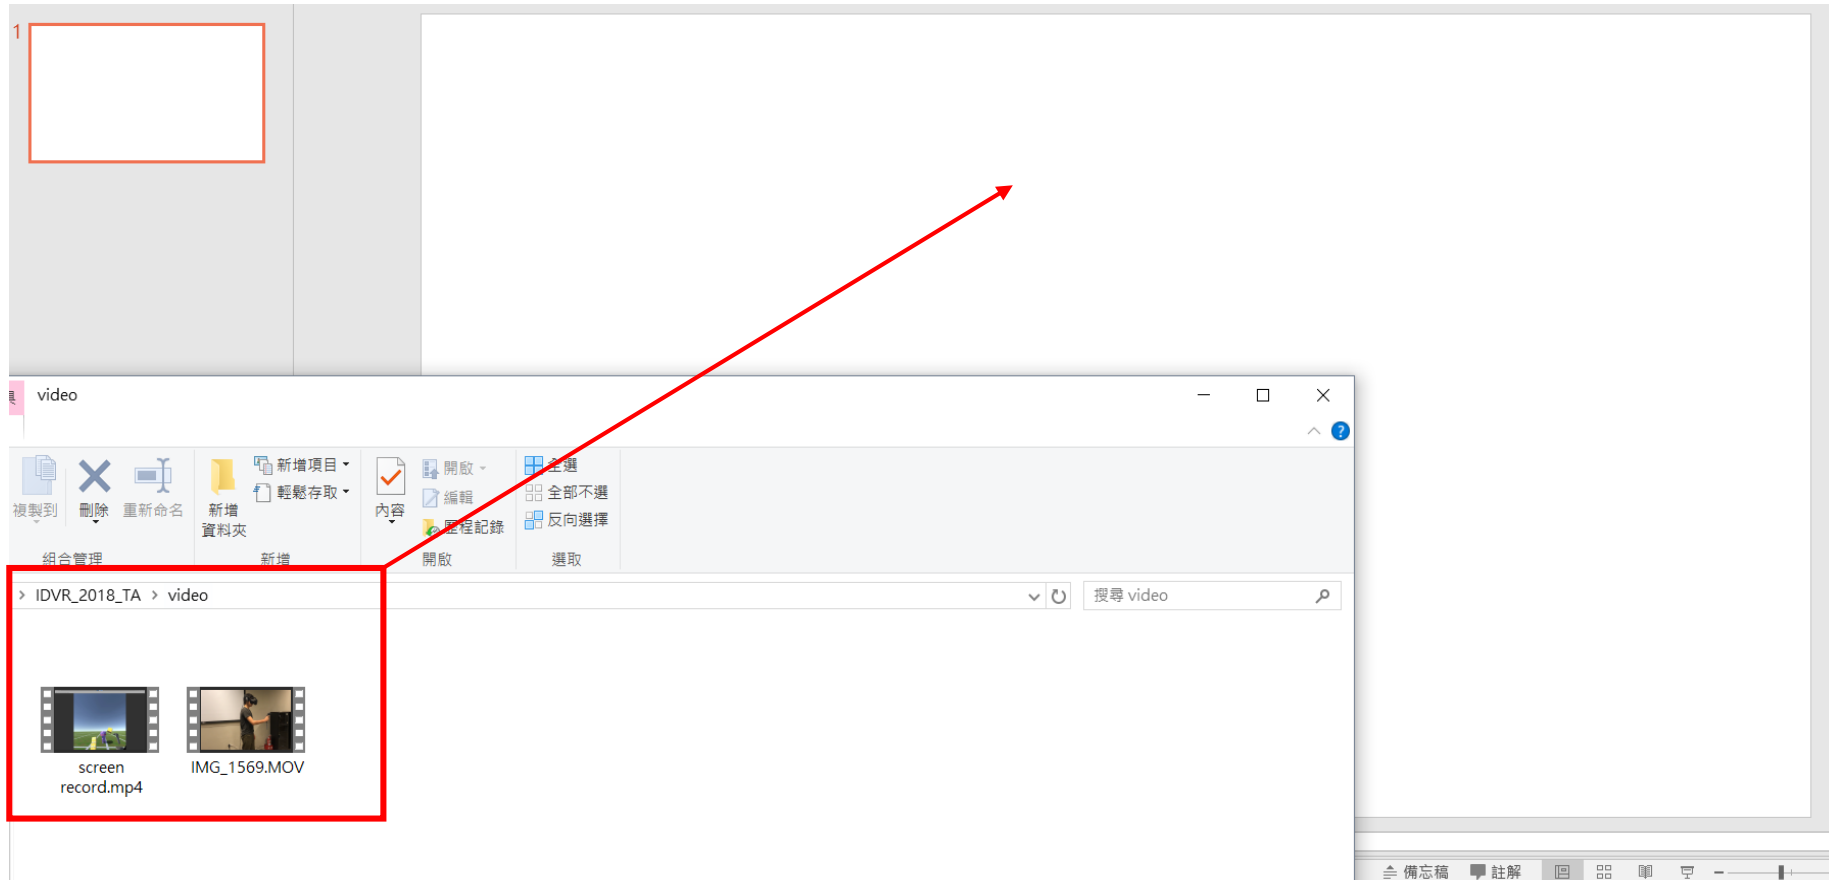

- PowerPoint + screen record
- video editor (e.g. iMovie).

Video editing with PPT

- **PowerPoint + screen record**
- video editor (e.g. iMovie).

Video editing with PPT

- Import video: drag your video on the slide

Video editing with PPT

- Format > Crop: make the video into suitable size

Video editing with PPT

- Format > Crop: make the video into suitable size

Video editing with PPT

- Remove sound

Trim the video

The screenshot displays the Microsoft PowerPoint 2016 interface. The ribbon is set to the '播放' (Playback) tab, with the '視訊工具' (Video Tools) group expanded. The '剪輯視訊' (Trim Video) button is highlighted with a red box and a red arrow pointing to it from the text 'Trim video'. The '播放' (Playback) button is also highlighted with a red box and a red arrow pointing to it from the text 'Playback'. The main slide area shows a video player with a red box around the 'Trim video' button in the top-left corner. A red arrow points from the text 'Trim video' to this button. The video player shows a person wearing a VR headset. The video player controls at the bottom show a progress bar at 00:00.00. The Windows taskbar at the bottom shows the time as 01:14 on 2018/10/9.

Trim video

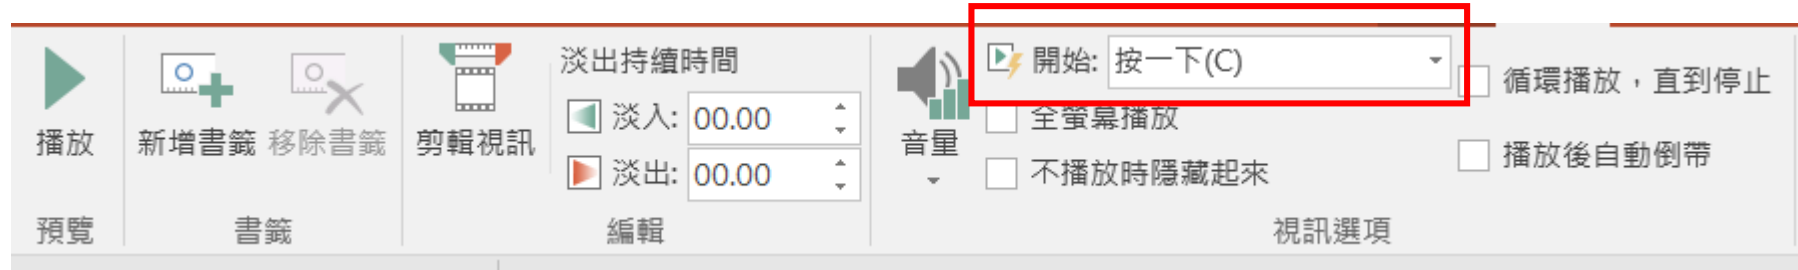

Playback

Trim the video

Play Video Automatically

Change the way of starting video from “Click” to “Automatically”

Make videos play at same time

- Next, you can find a window in the animation tab.

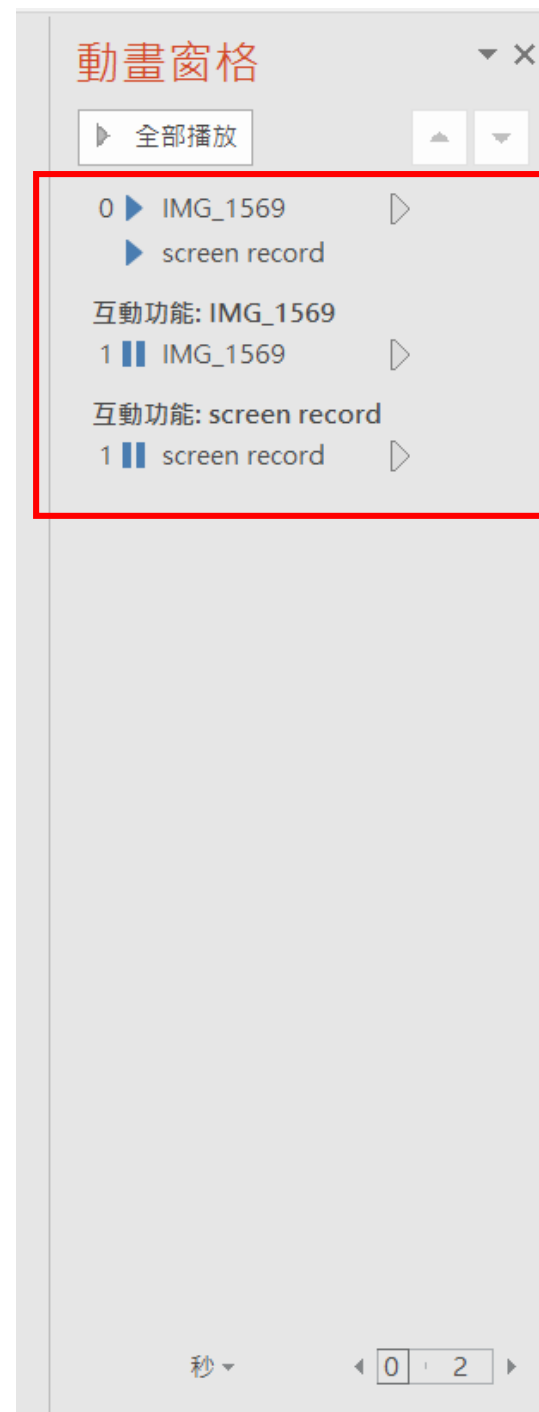

Animation

Animation pane

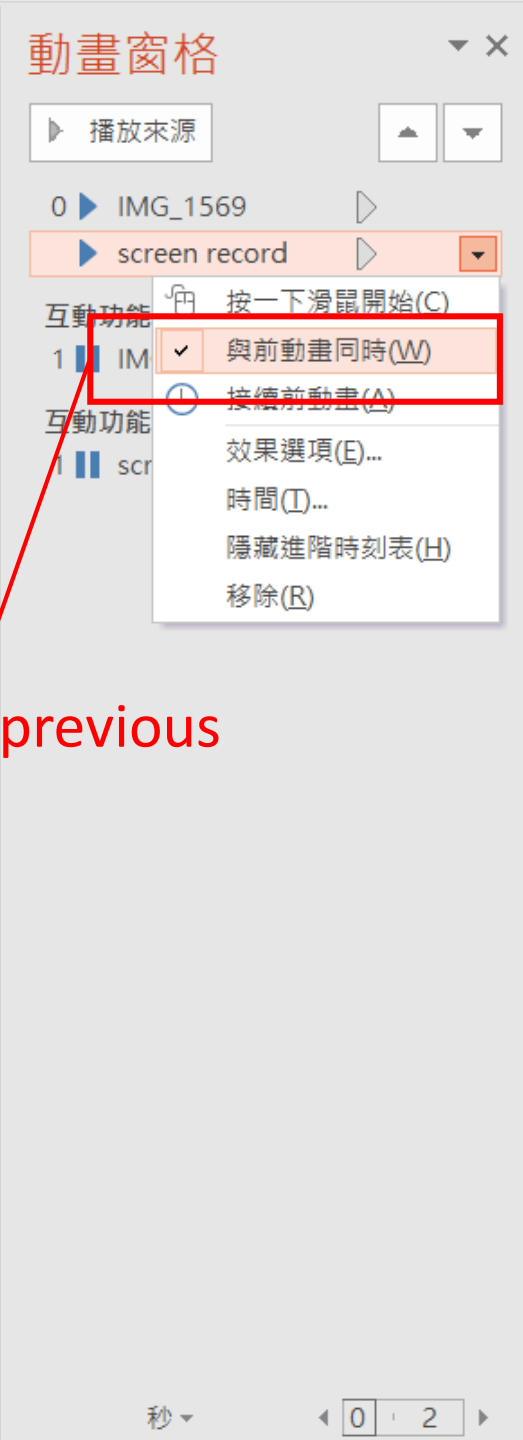

Make videos play at same time

- The play order of your video will show in animation pane

Make videos play at same time

- The play order of your video will show in animation pane
- Right click > Start with previous
- Play your slides, the videos should play at same time.

Start with previous

Do the Screen Record
